PROFESSIONAL SUMMARY

Marketing Data Scientist with 4+ years building Marketing Mix Models, geo-experiments, and propensity models that convert media investment into measurable, causally validated ROI. Combines applied statistical modeling in Python and R with production data engineering, translating complex measurement work into clear budget allocation recommendations for marketing leadership.

SKILLS & TECHNOLOGIES

Functional Competencies: Marketing Mix Modeling | Causal Inference | Geo-Experimentation | Incrementality Measurement | Experimental Design & Power Analysis | Multi-Touch Attribution | Propensity & Customer Modeling | Customer Segmentation | Media Budget Allocation | Channel ROI Measurement | Data Validation | Executive Communication | Cross-Functional Collaboration

Programming & Statistics: Python | R | SQL | Excel (Advanced) | Statistical Modeling | Regression Analysis | Time Series Forecasting

Modeling & Measurement: Marketing Mix Modeling (MMM) | Multi-Touch Attribution (MTA) | Geo-Holdout & Matched-Market Testing | Randomized Holdout Design | A/B & Multivariate Testing | RFM Segmentation | Price Elasticity Modeling | Cohort & Churn Analysis

Cloud & Data Infrastructure: Databricks | Snowflake | GCP | ETL/ELT Pipelines | REST APIs | CDP/CRM Integration (SFMC, CleverTap)

Visualization & BI: Tableau | Power BI | Looker | Adobe Analytics | GA4

WORK EXPERIENCE

Senior Analyst - Marketing Science

Sept. 2025–Present
Dallas, TX

Dave and Buster's, Inc.

- Developed a geo-granular Marketing Mix Model for a \$5M monthly paid media portfolio, validating outputs against experiment results to guide reallocation against declining sales; drove 40% increase in digital mROAS.
- Designed geo-holdout incrementality tests across 50 matched markets for paid social, selecting controls on pre-period trend correlation and adjusting for seasonality and promotional confounds; measured 4% true lift against 8% platform-reported, revealing ~2x over-attribution.
- Developed RFM-based segmentation and customer response models across 20M members, scoring cohorts on purchase propensity to drive a differentiated incentive strategy that delivered 2x growth in high-value cohorts.
- Designed randomized holdout experiments isolating incremental value of Email and SMS programs, establishing a standardized experimentation framework through content and send-strategy tests that lifted CTR by ~20%.
- Engineered measurement infrastructure underpinning all modeling work, implementing Adobe event tracking and consolidating paid, web, and SFMC CRM data into Databricks; improved tracking accuracy ~30%, cut manual QA 25%.

Marketing Analyst

Jul. 2023–May 2024
Remote

HealthifyMe Wellness

- Built end-to-end Marketing Mix and Attribution models in Python and R for a \$1.2M monthly media budget, quantifying channel-level ROI to optimize spend allocation across Meta, Google Ads, and LinkedIn; improved ROI by 10%.
- Developed audience clustering and customer segmentation models on unified CRM and in-app behavioral data via CleverTap, powering personalized lifecycle journeys across 2M+ users.
- Modeled price elasticity and product placement effects for e-commerce listings using SQL and marketplace analytics; designed A/B tests on resulting recommendations that delivered 15% MoM sales uplift.
- Automated the modeling and reporting pipeline in SQL, Python, and Tableau, reducing analysis turnaround by 60% and enabling real-time measurement access for growth and leadership teams.

Data Analyst

Apr. 2022–Jul. 2023
Bengaluru, India

Gameskraft Technologies (Gaming)

- Designed and analyzed A/B testing frameworks for GTM campaigns built on RFM-based customer segmentation, achieving statistically significant 1.5x CTR uplift and 4% retention improvement in high-value cohorts.
- Built revenue forecasting and profitability models for a \$30M gaming portfolio using SQL and time series methods; model-driven strategy adjustments generated ~\$15K incremental revenue within 3 months.
- Developed Multi-Touch Attribution models to decompose CAC trends across paid channels, optimizing media spend by 5%; funnel interventions from model insights improved conversion by 3% and cut recovery time by 7%.
- Delivered executive measurement reporting in Tableau for cross-functional marketing and business operations, translating model outputs into decision-ready recommendations.

INTERNSHIP EXPERIENCE

Data Analyst

Jan. 2025–Jul. 2025
Buffalo, NY

Buffalo Go Green Inc.

- Designed Power BI dashboards for sales, CRM, and marketing KPIs, standardizing reporting for faster operational decision-making.
- Engineered a scalable MongoDB schema and REST API endpoints, improving data accessibility for 3+ teams and eliminating 50% of manual data interventions.

EDUCATION

University at Buffalo, The State University of New York, Buffalo, NY
Master of Science in Management Information Systems (GPA: 3.9/4.0)

Jun. 2025

P.E.S COLLEGE OF ENGINEERING, India

Bachelor of Engineering in Mechanical Engineering (GPA: 3.6/4.0)

Aug. 2022
